-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 03 May 2005.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-23 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-23 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 15 April 2004 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
 Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
 Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 13, 18, 19, 21, and 22 are rejected under 35 U.S.C. 102(b) as being anticipated by Comer (PN 6,471,542). With respect to claim 13, Comer teaches an outer casing having a top panel, a bottom panel and four side panels (notebook computer, see col 2 line 12); attachment material disposed on said panels (the attachment device 108a, 108b must inherently attach to the panels of the electronic device), said attachment material being designed to be selectively coupled to a cable accessory (100) for said electronic device at two or more points on said top panel thereby enabling a carrying handle (see Fig. 1) to be formed by said cable accessory, said cable accessory being arranged to provide bottom panel support for said electronic device (when the accessory is connected to the device to facilitating carrying the device, the entire device, including the bottom panel, must inherently be supported in order for the accessory to function as a carrying handle), said carrying handle being arranged to snugly engage with user's hand (the handle can inherently be grasped by a hand), said cable accessory thereby providing both bottom panel support for said electronic

device and a carrying handle whereby said electronic device may be carried by a user using said handle formed by said cable accessory.

3. With respect to claim 18, Comer teaches wherein said electronic device includes a security recess (female connector corresponding to 165) for receiving a security connector (160) of a cable accessory (100) for said electronic device (see col 4 lines 44-50, disclosing how the cable functions as a security device).

4. With respect to claim 19 Comer teaches an accessory strap (170) for enclosing AC power conductors (190), said accessory strap comprising a series of two or more pre-formed sections (col 2 lines 1-7, the strap can be made of plastic and bonded together to encase components, therefore the strap would inherently be made of at least 2 pre-formed sections), said pre-formed sections being arranged to enclose electrical conductors (col 2 lines 5-7) used to connect said electronic device to a power source, said accessory strap being designed to be selectively placed around a bottom portion of said electronic device (col 2 lines 9-12, the attachment devices must inherently be attached to some outer portion of the device to act as a carrying strap, any outer portion would be around or approximate to the bottom portion), said accessory strap further including means for forming a carrying handle along a top portion of said electronic device, said accessory strap thereby providing both a carrying handle and bottom support (when the handle is used to carry the device, then the bottom portion must inherently be supported along with the rest of the device) for said electronic device whereby said electronic device may be carried by said carrying handle when said accessory strap is arranged around said bottom portion of said electronic device.

5. With respect to claim 21, Comer teaches wherein said electronic device is a laptop computer device (col 2 line 12).
6. With respect to claim 22, Comer teaches wherein said electrical conductors (190) are longer in length than said accessory strap (170) whereby said accessory strap is effective to prevent mechanical stress being placed on said electrical conductors when said accessory strap is used to carry said laptop computer device (see Fig. 1, 2).

Claim Rejections - 35 USC § 103

7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

8. Claims 1-7, 11, 12, and 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Comer (PN 6,471,542) in view of Harris et al. (US 2004/0217027).
With respect to claim 1, the method for enabling an accessory cable for carrying an electronic device is inherent in the structure of Comer. Comer teaches attaching a first portion (160) of said accessory cable (190) to said electronic device; attaching a second portion of said accessory cable to said electronic device at first and second attachment points (108a, 108b attached to attachment points on the device) on a top side of said electronic device, said first and second attachment points being located to enable a handle to be formed by said accessory cable between said first and second attachment points, said handle being arranged as a hand-grip (the handle is graspable by a hand)

to enable a user to hand-carry said electronic device by said handle formed by said accessory cable (see col 2 lines 15-17). Comer lacks where the accessory cable is wrapped around the bottom side. Harris teaches a handle (13, 12) wrapped around a bottom side of an electronic device (see Fig. 1, 2). It would have been obvious to a person of ordinary skill in the art to combine the power adapter carrying strap of Comer with the harness of Harris to obtain a carrying harness for a portable device where the AC adapter is built into the handle for the benefit of eliminating the need for a separate storage means for the ac adapter.

9. With respect to claim 2, Harris teaches where the electronic device is a laptop computer (11, [0009] lines 1-2).

10. With respect to claim 3, Comer teaches where the accessory cable (190) is a cord for an AC adapter (150) used with said electronic device.

11. With respect to claim 4, Comer teaches where the said accessory cable (190) is a security cable apparatus used with said electronic device (col 4 lines 44-50).

12. With respect to claim 5 and 6, Comer lacks specific teaching of a network connector or USB cable. It would have been obvious to a person of ordinary skill in the art to use any type of accessory cable known in the art, such as USB and network cables, to obtain the carrying strap of Comer for use with any accessory cable for the benefit of a carrying strap containing an accessory cable preventing said accessory cable from being misplaced.

13. With respect to claim 7, Comer teaches where said accessory cable (190) is enclosed within a flat belt-shaped strap (170, see Fig. 1), said strap being designed to provide additional support for said electronic device.

14. With respect to claim 11, Comer teaches where said first portion of said accessory cable (160) comprises an electrical power connection to said electronic device (col 4 lines 20-23).

15. With respect to claim 12, Comer teaches wherein said first portion (160) of said accessory cable (190) comprises a security connection device arranged for connection to a security recess within said electronic device (see col 4 lines 20-23, 44-50, the first portion functions as a security connection device).

16. With respect to claim 20, Comer teaches the device as applied to claim 19 above, but lacks "U" shaped sections around the outer edges of the electronic device. Harris teaches wherein the handle (12, 13) is "U" shaped and fits snugly around the outer edges of said electronic device (see Fig. 1). It would have been obvious to a person of ordinary skill in the art to combine the power adapter carrying strap of Comer with the harness of Harris to obtain a carrying harness for a portable device where the AC adapter is built into the handle for the benefit of eliminating the need for a separate storage means for the ac adapter.

17. Claims 14-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Comer (PN 6,471,542) in view of Dickison (PN 5,839,394). With respect to claim 14, Comer teaches the device as applied to claim 13 above, but lacks a selectively detachable hook and loop material. Dickison teaches of a selectively detachable hook

and loop material (see Fig. 1, 9 and 9' are made of hook and loop material col 2 lines 15-20) for use as an attachment means. It would have been obvious to a person of ordinary skill in the art to combine the hook and loop attachment means of Dickison with the carrying strap of Comer to obtain a detachable carrying strap for the benefit of an easily replaceable carrying strap.

18. With respect to claim 15 and 16, Comer lacks permanently attached hook and loop surfaces. Dickison teaches where the hook surface and the loop surface are permanently attached but lacks specific teaching of the orientation of the surfaces. It has been held that a rearrangement of parts of prior art without affecting the operation of a device is an obvious design choice. In re Japikse, 181 F.2d 1019, 86 USPQ 70 (CCPA 1950). It would have been obvious to a person of ordinary skill in the art to combine the permanently attached hook and loop surfaces of Dickison with the carrying strap of Comer where the hook material is attached to the panels and the loop material is attached to the accessory, or vice versa, for the benefit of an easily replaceable carrying strap.

19. With respect to claim 17, Comer teaches wherein the said attachment material is attached around outer edges of said side panels of said electronic device, but lacks teaching specific teaching of a belt attachment device. Dickison teaches wherein said attachment material is in the form of a permanently attached flat belt (7, see Fig. 1, the loop of 7 for the wrist is permanent). It would have been obvious to a person of ordinary skill in the art to combine the permanently attached hook and loop surfaces of Dickison with the carrying strap of Comer where the hook material is attached to the panels and

the loop material is attached to the accessory, or vice versa, for the benefit of an easily replaceable carrying strap.

20. Claims 8-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Comer (PN 6,471,542) in view of Harris et al. (US 2004/0217027) as applied to claims 1 and 7 above, and further in view of Dickison (PN 5,839,394). With respect to claims 8 and 9, Comer lacks where the strap is connected using hook and loop material.

Dickison teaches a selectively detachable hook and loop material (see Fig. 1, 9 and 9' are made of hook and loop material col 2 lines 15-20). It would have been obvious to a person of ordinary skill in the art to combine the hook and loop attachment means of Dickison with the carrying strap of Comer to obtain a detachable carrying strap for the benefit of an easily replaceable carrying strap.

21. With respect to claim 9 and 10, Comer as modified by Harris lacks where the strap is connected using hook and loop material. Dickison teaches a selectively detachable hook and loop material (see Fig. 1, 9 and 9' are made of hook and loop material col 2 lines 15-20). It would have been obvious to a person of ordinary skill in the art to combine the hook and loop attachment means of Dickison with the carrying strap of Comer to obtain a detachable carrying strap for the benefit of an easily replaceable carrying strap.

22. Claim 23 is rejected under 35 U.S.C. 103(a) as being unpatentable over Comer (PN 6,471,542) in view of Harris et al. (US 2004/0217027) and Dickison (PN 5,839,394). Comer teaches a lap top computer including an outer casing having a top panel, a bottom panel and four side panels (notebook computer, see col 2 line 12); attachment

material disposed on said panels (the attachment device 108a, 108b must inherently attach to the panels of the electronic device), a selectively detachable power cable assembly (100) for connecting said laptop computer to a power source, said attachment material being designed to be selectively coupled to a power cable assembly (100) for said laptop computer at two or more points on said top panel thereby enabling a carrying handle (see Fig. 1) to be formed by said power cable accessory, said power cable assembly being arranged to provide bottom panel support for said laptop computer (when the assembly is connected to the device to facilitating carrying the device, the entire device, including the bottom panel, must inherently be supported in order for the accessory to function as a carrying handle), said carrying handle being arranged to snugly engage with user's hand (the handle can inherently be grasped by a hand), said power cable assembly thereby providing both bottom panel support for said electronic device and a carrying handle whereby said laptop computer may be carried by a user using said handle formed by said power cable assembly. Comer lacks specific teaching of a hook and loop material and a series of "U" shaped sections.

Dickison teaches wherein an attachment material comprises a selectively detachable hook and loop material (see Fig. 1, 9 and 9' are made of hook and loop material col 2 lines 15-20) having a hooking surface and a corresponding loop surface, said attachment material being formed to comprise a flat belt (see Fig. 1). Harris teaches wherein the carrying handles (12, 13) of a laptop computer comprise of a flat belt permanently attached at points around outer edges of the side panels of said laptop computer, said handles comprising a series of "U" shaped sections (10, see Fig. 1)

designed to fit snugly around outer edges of said laptop computer. It would have been obvious to a person of ordinary skill in the art to combine the harness of Harris with the power cable assembly carrying strap of Comer and the teaching of the hook and loop material of Dickison as the attachment material for the benefit of a laptop harness with a selectively attached carrying handle containing the power supply.

Response to Arguments

23. Applicant's arguments with respect to claims 1-22 have been considered but are moot in view of the new grounds of rejection.

Conclusion

24. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Corey M. Broussard whose telephone number is 571 272 2799. The examiner can normally be reached on 7:30-5 M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Lynn Feild can be reached on 571 272 2092. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
